Portfolio: subham59036.vercel.app
Location: Kolkata, India

PROFESSIONAL SUMMARY

Java Full Stack Developer with 2+ years of experience building web applications using Java, Spring Boot, React.js, PostgreSQL, Redis, Docker, AWS and GitHub Actions. Skilled in REST API development, cloud deployment, distributed systems, CI/CD, database design and performance optimization. Passionate about writing clean, maintainable code and delivering reliable software from development through deployment.

WORK HISTORY

Full Stack Developer 06/2026 — Present
IIE Tech Club Kolkata, India

- Created the official institutional website to support 800+ students, faculty and administrative operations.
- Designed 11 responsive pages in React, reducing average page load time by 72% through code splitting and lazy loading.
- Integrated 3 backend services with Docker-based deployment, GitHub Actions and Prometheus monitoring to simplify release and maintenance workflows.
- Automated the deployment pipeline, reducing release time from approximately 20 minutes to < 5 minutes.

React Java Spring Boot REST APIs Docker GitHub Actions Prometheus

Full Stack Developer 03/2023 — Present
Fiverr Kolkata, India

- Delivered 23+ solutions for international clients across SaaS, e-commerce, project management and business applications.
- Engineered backend applications with Java, Spring Boot, PostgreSQL and Redis, improving P99 response latency by 15%.
- Optimized database queries and caching strategies to improve application responsiveness and resource utilization by 40%.
- Maintained cloud deployments on AWS using Docker, supporting reliable releases, high application availability and 0% downtime.

Java Spring Boot PostgreSQL Redis AWS Docker Maven

EDUCATION

Bachelor of Technology — Computer Science & Engineering 07/2025 — 06/2029
Ideal Institute of Engineering — Kolkata, India CGPA 7.55

SKILLS

Languages:	Java, JavaScript, SQL
Backend:	Spring Boot, Spring MVC, Spring Security, REST APIs, JPA, Hibernate, Maven
Frontend:	React.js, HTML5, CSS3
Databases:	PostgreSQL, Redis
Cloud & DevOps:	AWS (EC2, S3, RDS), Docker, GitHub Actions, Linux, Prometheus, Grafana
Tools:	Git, GitHub, Docker Compose
Concepts:	Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), DBMS, SDLC, Agile, Test-Driven Development (TDD), Design Patterns, Distributed Systems

PROJECTS

Eclipse [Link: github.com/subham59036/Eclipse](https://github.com/subham59036/Eclipse)

- Created a collaborative project management platform supporting task assignment, priorities, deadlines and multi-team workspaces through 20+ API endpoints.
- Enabled instant task updates with Redis Pub/Sub, reducing notification latency to under 500 ms without continuous client polling.
- Presented application health and team activity through Grafana dashboards backed by 10+ Prometheus metrics.
- Organized the application with Docker Compose and PostgreSQL, managing more than 15 normalized database tables for consistent data storage.

Java Spring Boot React PostgreSQL Redis Docker AWS Grafana Prometheus

Beakon [Link: github.com/subham59036/Beakon](https://github.com/subham59036/Beakon)

- Designed an inventory management system for tracking suppliers, stock levels, expenses and products across 100+ outlets.
- Automated low-stock notifications through Redis event streaming, generating alerts in < 1 second.
- Simplified product management by synchronizing listings across multiple online storefronts from a single dashboard.
- Produced live business reports with customizable KPI dashboards, reducing manual reporting effort by approximately 30%.
